

SAA CLOUD HOSTING

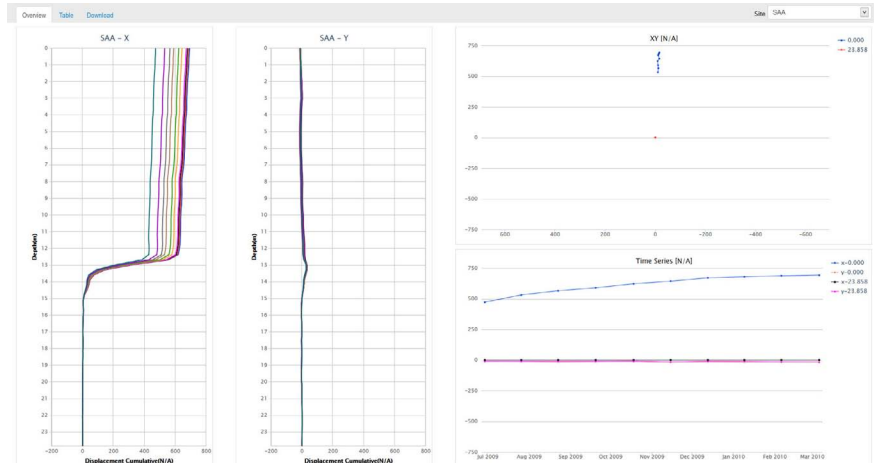

ACCESS YOUR SAA DATA ONLINE

With SAA cloud hosting the data is available online in real time. Simple to view one or multiple SAA.

By using the cloud service there is no need for a local data server or IT involvement.

It is possible to include all other Geotechnical sensors in the cloud hosting.

BENEFITS

EASY ACCESS

Easily access data from anywhere through password protected web interface.

MULTIPLE PROJECTS

Create projects containing one or more instruments. Give access to selected projects which are accessible online.

REAL TIME DATA

Have access to real time data online. Data is collected as often as needed, converted automatically and imported into the system.

ALARM LIMITS

Add Limits to each SAA plot and get a notification if the plot exceeds the limits.

ACCESS CONTROL

Have an Admin user for the project and a Client user that has limited access.

ALL DATA IN ONE LOCATION

Combine all other geotechnical instruments in a single interface. For Example: Piezometer, Extensometer, Strain Gage, Dynamic Vibration, Total Station, Weather Station, etc.

GET STARTED QUICKLY

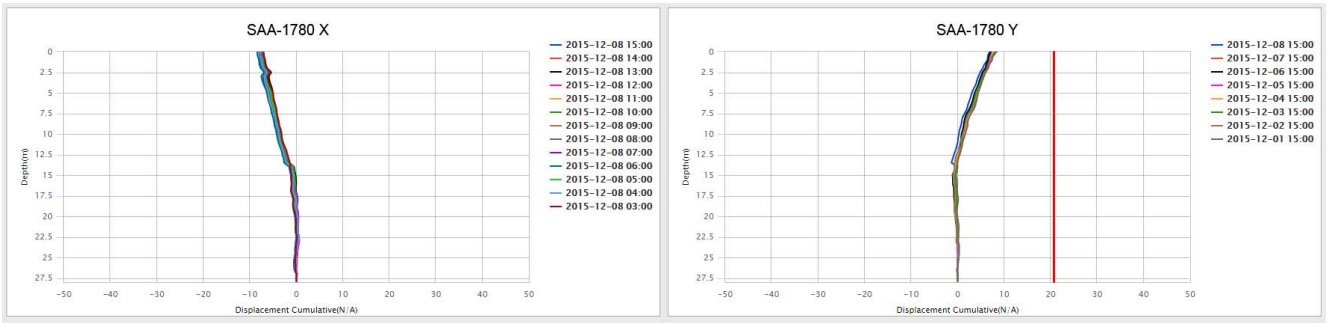

Contact Measurand or Vista Data Vision and get a quote for your project. It only takes 1-2 business days to get the system up and running.

SAA.VDV.CLOUD.COM

Take a look at our demo server with live SAA readings taken every hour.

NEED SUPPORT?

Feel free to ask us any questions regarding your project.

View one or multiple SAA at a time. Add Alarm limits that will be sent to a contact group if reached.

HOW TO START?

Get a quote

Contact Measurand or Vista Data Vision and get a quote for your project.

Try our live demo web

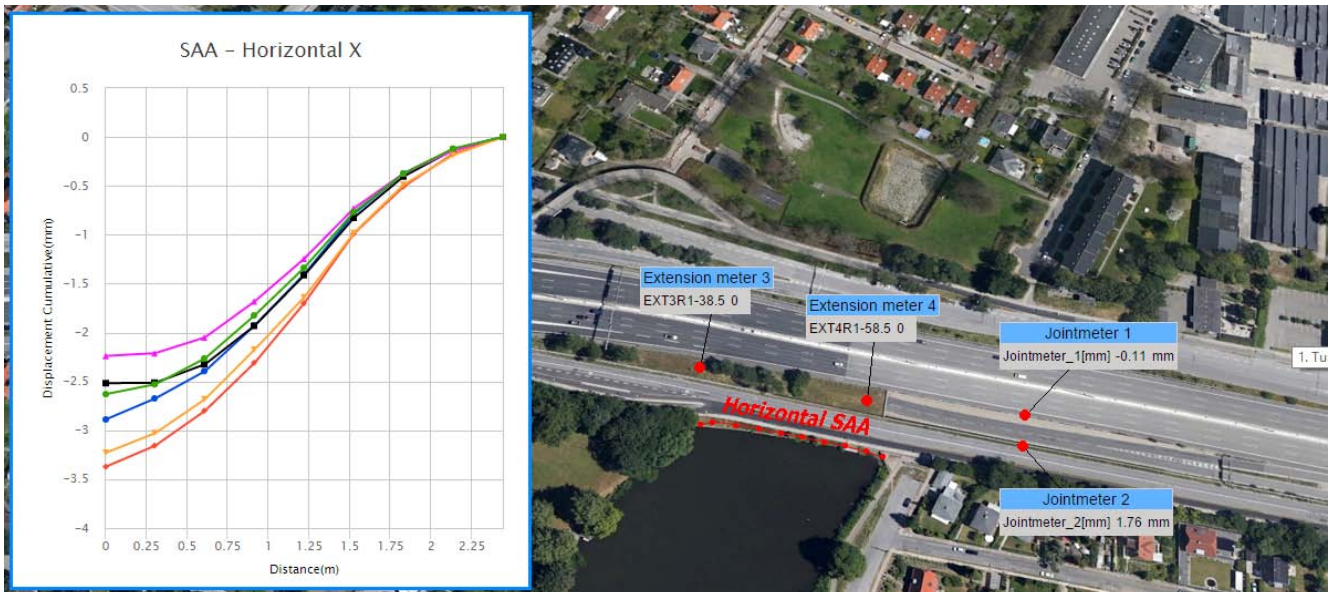

saa.vdvcloud.com

What is required?

A cellular modem with fixed IP address.

Our service

Initial configuration of SAAs.
Data collection & storage.
Web access to data & reports.
Excellent customer service.

See a full project overview of all instruments.
